| clone_lib="Organ: Bys. Vector: pxx- Asc; Site_l: Ecok I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-886, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA synthesis was primed with oligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with Ecok I adaptor, digested with NotI and then cloned directionally into pXx-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CTGCGTCCTC. This library was created for the University lows Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMM), Hemin Chin, Ph.D., program coordinator."

The sequence contained an oligo-dr track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the Not1 site and the oligo-dr track served to identify it as a clone from the normalized cervix library cDNA Library Preparation: M.B. Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AC1 Direct Submission Submitted (01-AUG-2003) Genetics, Genome Sequencing Center, 4444 Forest Park Parkway, St. Louis, MO 63108, USA NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. 5445: contig of 5345 bp in length 5445: gap of unknown length 17195: contig of 1175 bp in length 17295: agap of unknown length 33250: contig of 15955 bp in length 33350: gap of unknown length 45546: contig of 15296 bp in length 61992: contig of 16246 bp in length 61992: gap of unknown length 63423: contig of 1331 bp in length 63423: contig of 1331 bp in length 63666: contig of 1143 bp in length Center: Washington University Genome Sequencing Wilchages to 1737/0/ The sequence of Pan troglodytes clone Unpublished --- Genome Center 2 (bases 1 to 175370) Wilson, R.K. 5346 17196 17296 333251 33351 45547 45747 62093 63424 RESULT 3 AC145861 LOCUS DEFINITION VERSION KEYWORDS SOURCE ORGANISM REFERENCE AUTHORS TITLE JOURNAL REFERENCE AUTHORS TITLE JOURNAL ACCESSION

It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Moderolar and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
ON NOV 15, 2002 this sequence version replaced gi:23269619.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assemble using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold in the Sequence may extend beyond the ends of the clone and there may be sequence may extend beyond the ends of the clone and there may be sequence contigs and of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome Cardenas, V., Carter, K., Cavazos, I., Ceasar, H., Center, A., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Chardo, J., Davis, C., Davy-Carroll, L., De Anda, C., Dederich, D., Delagado, O., Denson, S., Deramo, C., Ding, Y., Dinh, H., Divya, K., Drapara, C., Finley, M., Flagg, M., Forser, F., Fanger, F., Fanger, F., Fanger, F., Fanger, C., Franklor, M., Garcia, A., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Garcia, M., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, J., Mando, Direct Submission
Submitted (22-MAY-2002) Human Genome Sequencing Center, Department

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).

NOTE: This is a "working draft' sequence It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. 40067; contig of 40067 bp in length 40068 40167; gap of unknown length 40168 114660; contig of 74493 bp in length 11461 114760; gap of unknown length 114761 188186; contig of 73426 bp in length 188187 188286; gap of unknown length 188287 190149; contig of 1863 bp in length Location/Qualifiers 1. .190149 /organism="Rattus norvegicus" /mol\_type="genomic DNA" /db\_xref="taxon:10116" /clone="CH230-108A24" Project Information Contact: hgsc-help@bcm.tmc.edu source FEATURES ORIGIN

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This sequence encodes the mouse CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a

                                                                                                                                                                                                      The present sequence encodes a murine CXC chemokine receptor which bind to the mouse CXC chemokine pre-B cell stimulatory factor PBSF/SDF-1. Th nucleic acid is isolated from mouse pre-B cell line DW14. The receptor and cells expressing it can be used in the study and mapping of the mechanism of HIV infection and in screening of potential inhibitors of HIV infection and the development of AIDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GATGACAGGTACATCTGTGACCGCCTTTACCCCGATAGCCTGTGGATGGTGGTGTTTCAA

Girdlestone J;

The present invention relates to a new polypeptide capable of binding to a nucleic acid comprising a receptor nucleotide sequence which can function as a receptor for virus infection or is involved in an immune response. The molecules of the invention are useful in the treatment or prevention of a disease caused by a virus or of a disease associated with an immune response. Particularly an autoimmune disease. The zinc finger polypeptide or a nucleic acid encoding such a polypeptide can be used to modulate transcription of a receptor nucleotide sequence. The nucleic acid supply peptide capable of binding to a nucleic acid sequence comprising a receptor nucleotide sequence of binding to a nucleic acid sequence comprising a receptor nucleotide sequence, where the receptor is capable of functioning as a receptor for infection by the virus or is involved in an immune response, or a nucleic acid encoding such a polypeptide, can be used in the preparation of a medicament for use in the treatment or prevent various diseases caused by a virus or of a disease associated with or caused by malfunction of the receptor as the TNFR1 receptor, such as autoimmune diseases including inflammation, autoimmune accomed assesses including inflammation, autoimmune accomed sequence represents a correct represents a correct receptor represents and carterities or myocardities. The present nucleic acid sequence represents and correct or an encoded sequence.

CXCR4-potentiating agents and methods useful for inhibiting neovascularization, and treating solid cancers.

Disclosure; Page 48-49; 63pp; Japanese.

This sequence encodes the human CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. It is also possible to establish methods for treatment with the use of these remedies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       720
                                                   The invention relates to human CXC chemokine receptor 4 (CXCR4) -specific antisense oligonucleotides (AAA61652-A61654). The oligonucleotides hybridise with the CXCR4 gene and/or CXCR4 RNA, thereby preventing its expression. As CXCR4 plays a role in HIV infection, the antisense oligonucleotides act as inhibitors of this process. Compositions containing the antisense oligonucleotides are useful as prophylactic or therapeutic agents for HIV infection. Such compositions are highly efficacious for inhibiting infection with HIV. The present sequence represents a human CXCR4 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        391

```
This sequence represents a CXCR4 coding sequence. The invention relates to antisense oligonuclectides that hybridise specifically with chromosomal DNA and/or RNA encoding a CXCR4 protein, and inhibit the expression of the CXCR4 protein. The antisense oligonuclectides can be used in an anti-HIV agent. The oligonuclectides and the anti-HIV agent are highly effective as a preventive and treating agent for HIV infection
                                                                                                                                                                                                                                                                                                                         TCCATCATCTTCTTAACTGGCATTGTGGGCAATGGATTGGTCATCCTGGTCATGGGTTAC

                                                                                                                                                        The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering the a mammal a compound that lowers the level of neuropeptide Y (NPY) in the serum or cerebrospinal fillud (CSF) or a compound that lowers the level of inositol phosphate (IP) or extracellular signal-regulated kinase (ERX). The method is specifically used to treat (including by gene therapy) or prevent osteoporosis, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in sequence is a human NPY %3 receptor DNA

The specification describes an antibody which is specific for an antigenic fragment of gpl20. This antigenic fragment binds to DC-SIGN or is exposed upon gpl20 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gpl20-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by infection. The present sequence represents a human polynucleotide, which is used in the course of the invention

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha.

Disclosure; Fig 1; 26pp; English.

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stromal cell-derived factor lalpha (SDF1a). The method is used for stimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibition of this process is useful in treatment and prevention of a very wide range of diseases, such as, infection (by bacteria, fungi, protozoa or viruses such as human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, cathorisms of disease, acute heart failure, hypotension, thypertension, urinary retention, osteoporosis, anginal pectoris, myocardial infarction, stroke, ulcers, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders (e.g. anxistety, chizophrenia) and dyskinesias (e.g. Huntingdon's disease, inflammatory diseases, theumatoid arthitis, diabetic retinopathy, inflammatory bowel disease, atherosclerosis, restenosis, Alzheimer's disease, congestive teceptor 4 (CXCR4) polynucleotide encodes the human CXC chemokine

Identifyir conditions types unde		CC The present invention relates to methods for identifying genes and CC proteins that are implicated in a specific disease or physiological of C condition. The method comprises comparing the transcriptome/proteome of a CC specialised cell type implicated in a disease or condition with that of a	CC second specialised cell type, under two experimental conditions, and CC identifying a gene that is differentially regulated in the two CC specialised cell types under experimental conditions. ABV7813-ABV78116 CC and ABP65061-ABP65257 were identified using the methods of the inventionCC The coding sequences and proteins are useful for treating a disease in a	patient, for manufacture of a medicament for treating hypoxia-regulated

conditions, and for regulating tumourigenesis, angiogenesis, apoptosis, biological response to hypoxia conditions, or hypoxic-associated pathology in a patient. The coding sequences and proteins are also useful for monitoring the therapeutic treatment of a disease or physiological condition, such as cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, preeclapmsia, atherosclerosis, influmy conditions, wound healing, inflammation, erythropoiesis or hair loss
                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

Detecting angiogenesis-associated transcript in a cell for diagnosing and treating cancer by contacting a sample with a polynucleotide that exhibits changes in expression level as a function of time in tissue
                                                                                                                                                                                    undergoing angiogenesis.
```

Example 2; Page 217-218; 291pp; English

The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves concacting a biological sample from the patient with a polynucleotide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polynucleotide sequences given in the specification. These angiogenesis-associated polynucleotide sequences comprise genes that exhibit changes in expression levels as a function of time in tissue undergoing angiogenesis. The method and the polynucleotide sequences of the invention are useful for diagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynucleotide sequences are also useful in the gene therapy of such disorders. The sequences are also useful in the gene therapy of such disorders. The angiogenesis-associated proteins encoded by the polynucleotide sequences are useful as a vaccine for therapeutic and prophylactic immunisation. sednences

The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to muchalic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-CC) microard that hybridise to the probes under high stringency conditions. The microarray is useful for the proposis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human cDNA sequence up-regulated in CC-RCC patients
                                                                                                                                                                                                                                               New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma.
                                                                                                                                                                                                                                                                                                                       Claim 35; Page 132-133; 179pp; English.

                                                                                                                                                                                                                                                                                                                                The present sequence encodes human chemokine receptor CXCR4. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The provise is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchicis, pneumonia or asthma
                                                                                                                                                                                                                                                       Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or aschma, by modulating a binding interaction between a cell chemokine-receptor and surface protein of the virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APATACACTTCAGATAACTACACCAAGGAAATGGGCTCAGGGGACTATGACTTCCATGAAG

(LIFE-) LIFESPAN BIOSCIENCES INC

New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or

Disclosure, Fig 1; 523pp; English

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acid acid described: (1) an assay for the detection of a particular grow of the complex of any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acid acid described: (1) an assay for the detection a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (T) can be used as GPCR modulators and in antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific consistence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related disease, immunological-related cileases, cell related diseases, immunological-ralated cell proliferative disease, or autoimmune diseases, immunological-ralated cell proliferative disease, or autoimmune disease, e.g. ALDS, Alzheimer's disease, atherosclerosis, bacterial, fungal, protozoan or viral infections, inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, multiple sclerosis, pain, psoriasis, hypotension, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypotension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in mynich GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ4269 encode GPCR proteins given in ABP81675 to ABB42523 to ABZ4269 encode exemplification of the present invention

Use of a CXC chemokine receptor 4 (CXCR4) inhibitor, for modulating cellular adhesion or inhibiting proliferation, movement, or morphological change in a small cell lung cancer (SCLC) cell population, or for treating a subject having SCLC

Disclosure, SEQ ID NO 1; 78pp; English

The invention relates to methods and compositions for inhibiting small cell lung cancer (SCLC) proliferation and metastasis through modulation cell lung cancer (SCLC) proliferation and metastasis through modulation of the activity or expression of CXC chemokine receptor 4 (CXTR4), and coptionally, that of the tyrosine kinase receptor c-Kit. Administration of a CXCR4 inhibitor modulates cellular adhesion and inhibits cellular copilation. The invention is based on the finding that CXCR4 is ubiquitously expressed, and SCLC cell.

CC proliferation, whether a sample of conserved concerved to CXCR4 inhibitors; cc determining whether a sample of lung cancer cells expresses CXCR4 and is therefore amenable to CXCR4 inhibitor therapy; determining whether a sample of lung cancer cells coexpress CXCR4 and c-Kit is is therefore amenable to treatment with a combination of a CXCR4 inhibitor and a c-Kit inhibitor compination of a CXCR4 inhibitor therapy or cxCRA inhibitor therapy should be continued, by determining CXCR4 (and optionally c-Kit) are civily in two or more tumour samples taken from an SCLC patient during the course of treatment cxCR4 inhibitor compination are useful for treating SCLC, for screening for agents for the treatment of SCLC, for determining whether a SCLC from individual patients is suitable for treatment with agents of the invention, and for determining whether such treatment is effective and should be continued. The present sequence represents CDNA encoding human cyck, which can be used in methods of the invention. ¥88888888888888888888888888888888

Sequence 5, Application US/09582224A

Patent No. 642308

GENERAL INFORMATION:

APPLICANT: 101MA, Osamu

APPLICANT: SHIMADA, Takashi

TITLE OF INVENTION: HIV Infection Inhibitors

FILE OF INVENTION: HIV Infection Inhibitors

FILE OF INVENTION: HIV INFECTION INDER:

CURRENT APPLICATION NUMBER: US/09/582,224A

CURRENT APPLICATION NUMBER: PCT/JP99/06534

PRIOR FILING DATE: 1999/11/24

NUMBER OF SEQ ID NOS: 5

SOFTWARE: Microsoft Word

SEQ ID NO 5

LENGTH: 1664
                                                                                                                                                                                                                                                                                                                            ALIGNMENTS
